

8 REASONS TO GO RUGGED

Why a rugged device is better for your construction business

1

YOUR PHONE SHOULDN'T BE AFRAID OF A LITTLE MUD. OR A LOT OF MUD.

Our phones are certified to Military Standard 810G and IP68 to protect against heavy dust, shock, extreme temperatures and more for complete reliability.

5

IF YOU CAN'T PUSH TO TALK, YOU LOSE PRECIOUS TIME.

The Push-to-Talk feature on our devices is helpful and affordable for construction businesses that rely on walkie-talkie-style communication.

2

BUSINESS DOESN'T STOP WHEN THE RAIN STARTS.

Glove and Wet Touch Screen Operation means our devices still work when wet, keeping you productive and connected in the elements.

6

WHEN YOUR PHONE DOESN'T BREAK, YOU DON'T WASTE MONEY REPLACING IT.

Rugged devices like ours can lower the Total Cost of Ownership for businesses by an average of 46% compared to non-rugged smartphones.

3

WHAT'S IN YOUR PHONE IS NO ONE ELSE'S BUSINESS.

Our devices include extensive security features like Android for Work, biometric fingerprint authentication, and more.

7

YOU CAN SWITCH YOUR WORKFORCE TO THE CARRIER OF YOUR CHOICE WITH EASE.

Our rugged devices are the only ones to be offered by nearly all major carriers in North America, and Kyocera devices are roughly half the cost of other companies' flagship phones.

4

YOUR OFFICE IS A CONSTRUCTION ZONE, AND YOUR PHONE SHOULD BE UP FOR THE CHALLENGE.

Our phones have the features you want without sacrificing your company's needs. Hazardous Location Class I, Division 2 certification provides extra protection in your work environments.

8

YOU WANT A PHONE FOR WORK AND PLAY.

With standout performance features for your personal life and extreme durability for your work life, our devices are ideal for your workday and everyday activities.
